

Fuel Security Code (FSC) Guidance

Further to the publication of a revised Fuel Security Code the BSC Panel raised P221 'Amendments to the BSC to reflect the revised Fuel Security Code (FSC)'. P221 simply ensures the BSC is consistent with the FSC and has been recommended for approval by the Panel.

As part of the consultation for P221 the Panel received feedback that a standing Issue group should be formed to consider the FSC guidance (which published alongside the revised FSC) and the letter sent from BERR to Ofgem regarding queries raised in relation to the revised FSC. Respondents suggested that clarification may be necessary (either formally within the BSC or in the form of guidance from ELEXON and/or Ofgem) regarding:

- a) Cost Recovery Processes;
- b) Interim Claims Processes;
- c) Communication of Fuel Security Period;
- d) Presentation of Claims; and
- e) Role of BSC Panel.

The BSC Panel therefore agreed to raise a new Issue to consider the FSC Guidance and BERR letter to ELEXON.

The Fuel Security Code guidance can be found on the BERR website:

<http://www.dti.gov.uk/energy/reliability/downstream/page30313.html>

The BERR letter to ELEXON is included as Attachment 1.
